MODEL: SR10

SUBJECT: SR10 WASTEGATE ACTUATOR BRACKET BOLTS

PRIORITY – HIGH (INFORMATION)

In order to improve strength, the wastegate actuator bracket bolts have been increased in length.

It is advised to change these bolts for the 2x supplied 5/16"x5/8". These should be fitted with a 5/16" T3 washer and a spring washer. It is easier to replace one bolt at a time as there is preload on the actuator.

The other 4 bolts in the compressor housing remain unchanged.

See below:

The bolts cannot be torqued when they are fitted to the car due to access, so they should be tightened sufficiently.
