STEERING WHEEL GEAR INDICATOR PIXELATING

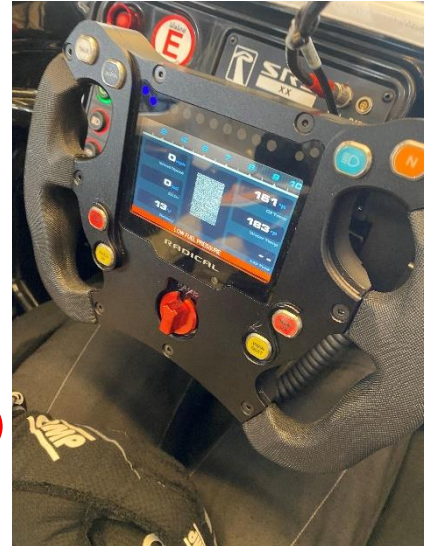

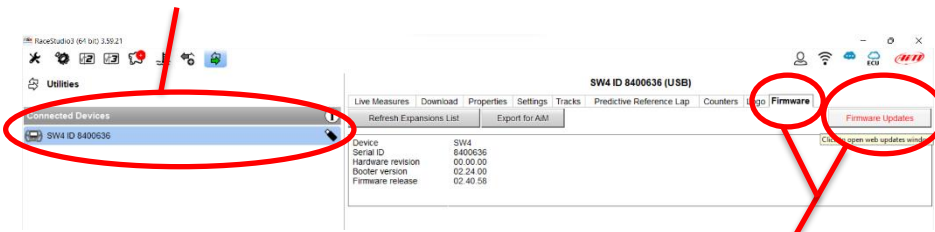

PRIORITY – HIGH (ACTION)

Aim have released a fix for the bug that caused the gear indicator number to display pixelated.

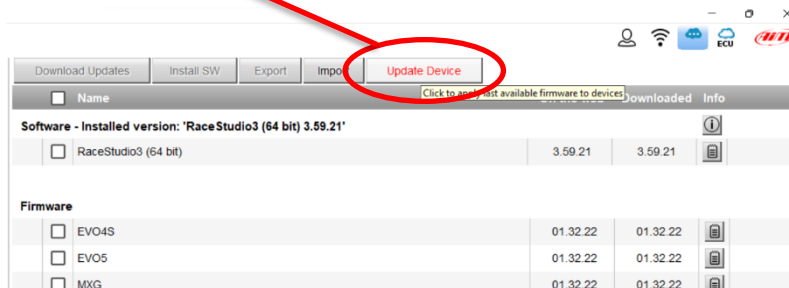

1. Open up the AIM Race Studio 3
2. Download and install the latest web updates

3. Use LH0377 Steering Wheel interface for all PDM and PDU cars or AIM download lead for PDU cars and connect to Steering wheel.
4. Click on the SW4 ID icon displayed on left hand side panel to

5. Click on Firmware than Firmware Updates button on the right hand side
6. Click Update Device

7. A little dialogue window will pop up. Press Update device to **02.40.58 (or later)**. Do not close your laptop or disconnect any leads. This procedure will take approximately 40 seconds during which the steering wheel screen will turn blue and display "Firmware Upgrade"
8. Once this process is completed SW will re-boot and reconnect itself back to RS3.
9. No further action will be required
