FUEL PUMP PART NUMBERS***PRIORITY – LOW (INFORMATION)***

Please see below table to help clarify fuel pump part numbers:

Fuel tank	Production fitment	Tank stock code	Fuel pump
Aluminium fuel tank	from 2010	FT0016	FP0030
ATL bag tank (discontinued) (bridge on base plate for gear lever, pump on LH side)	production fitted pre July 2021	FT0180	FP0035
ATL bag tank gen2 (discontinued) (flat bottom tank, pump in centre)	production fitted July 2021-December 2022	FT0180	FP0032
Proflex fuel tank (black fuel tank, pump in centre)	production fitted post December 2022	FT0192	FP0036

FP0030 and FP0035 are plastic collector pots fitted with motorsport specification pumps. FP0030 has the upper connection panel fitted as required on Aluminum fuel tanks. The FP0035 is the same unit with this panel removed.

FP0032 and FP0036 are both regular in tank pumps fitted with sock 'style' filters. The filters are the same for both pumps and are part number FF0017.

Gen2 ATL tanks as fitted to many of the SR3-XX cars can be retrofitted with FP0036 pumps instead of the FP0032 pumps, these newer FP0032 pumps have a lower current draw which can improve overall electrical charging on these car. In order to retrofit this FP0036 an LH0412 adapter loom is required.

Please note that FP0032 cannot be used in combination with Proflex fuel tank FT0192.
